Vector Fixed Panel style Patchboards provide simple but reliable low-cost units for multiple connection, single conductor patching for test panels, automation and telemetry equipment, low cost computers, numerical control equipment, paging and speaker systems or other equipment where economy and connection multiplicity are desired.

Extremely low contact resistance (less than .001 ohms) and long contact life (over 2000 insertions per contact without resistance change) assures reliability.

Vector TUBE SOCKET TEST ADAPTERS AND EXTENDED TUBE SOCKET TEST ADAPTERS

T-789

T9N

T7MS

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Kit T789 consists of the three popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval and a P1 probe in a handy clear plastic carrying case.

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling.

Special Adapters Designed to Customer Specifications—Write Factory.

EXPERIMENTER'S TEST ADAPTERS SOCKET EXTENDERS

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections.

SOCKET EXTENDERS provide a replaceable unit for use in tube testers and sensitive meters. Wear is shifted from the socket in the tester to the one on the extender. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to pins.

INBORD PINS

Vector Inbord Pins answer the need for small compact terminals for circuit boards. Pins will fit .025", .040" holes. Knurled portion in body of terminal provides tight fit in circuit board holes without special staking. Soldering leads to the pins or use of retainers makes pin permanent. Mating receptacle R23A accepts .040 diameter pins. All pins are phosphor bronze.

CURRENT TEST ADAPTERS

VECTOR CURRENT TEST ADAPTERS have two spring test tab elements for each pin. These test tab elements break the circuit when a dual-sided probe is inserted in test position. Probes are gripped by the test tabs and need not be held in position. Current is read at the meter where the two test leads are connected. The same test adapters and probe also permit voltage and wave form readings on any pin position, merely by connecting the leads jointly to the meter. The adapters have mica-filled shell and keyways, and may be used in a horizontal or vertical position.

29X INTEGRATED CIRCUIT EXPERIMENTER'S KIT

The 29X Kit is a special group of new Vector products especially designed for fast, easy hookups of nearly all package configurations of integrated circuits. The mounting surface is a pre-punched Micro-Vectorbord* having .042" diameter holes on 1/10" grid spacings supported on Vector Frame-Loc Rails 2" high. Dual-in-line packages may be fastened directly to the breadboard with the tails extending through the holes; or special sockets supplied may be used which have square tails which also push into the board. Integrated circuits of the TO-5 type may also be mounted with wafers, which are supplied, or in sockets supplied with leads formed to plug into the board. Transistor sockets whose leads also fit the board are supplied. Supplied T42-1 Micro-Klip push-in terminals fit board holes and are ideal for mounting discrete components of various types. Inboard Pins of .040" diameter also push into the holes for tie points or plug points. Wiring of these leads may be done by use of supplied polyurethane coated solderable wire which may be wrapped around the terminals and soldered through the insulation or by "Daisy Chain" patch cords which will connect directly to the wire-wrap tabs or other pins, thus facilitating quick experimental connection. Flatpacks with .05" spaced leads may also be mounted by use of furnished adapter plates which plug into the holes of the breadboard. These will normally be soldered to the adapter plate terminals. **\$59.75**

VEROBOARD BK-6 KITS ETC.

STEP NO. 1

First stage is to lay out the circuit plan on a Vero Design Sheet — printed to represent the plain and copper sides of the appropriate Vero-board — allowing proper spacing for components and indicating where the copper strips are to be broken.

STEP NO. 2

Layout components on the back (plain) side of the Vero-board across the copper strips inserting leads into appropriate holes. You now have connected your components as required using the copper strips as your interconnectors. Leads may be soldered directly to the strips using a light, printed circuit type iron. Careful soldering will enable you to remove components and replace them if required.

STEP NO. 3

Break the circuit where required by breaking the copper strips with the Vero spot-face cutter provided in your kit. The cutter is a precision, hardened steel tool which has a pilot pin that fits into any hole, and two cutting edges. Simply turn the cutter several times and the copper strip in the area of the chosen hole will be removed. Your circuit is now complete.

MICRO MITE MOLDED R.F. CHOKES J. W. MILLER COMPAN

Nicknamed the "Micro-Mite", these rugged coils exhibit high Q and very low distributed capacitance concentrated into an amazingly small package. They are ideal for use where weight, space, high Q considerations are involved. Size reduction ranges up to 80% of equivalent standard mold chokes. The construction of these coils permits miniaturization without the use of ferrite materials, thus maintaining temperature stability. This series of molded coils conforms to MIL-C-15305.

Molded Choke Coils Color Coding

For cylindrical choke coils. Cylindrical choke coils shall be marked with five colored bands. A silver band MIL identifier of double the width of the other four bands, located near one end of the coil, identifies military radiofrequency coils; four other bands of equal width, three indicating the inductance in microhenries and the fourth band indicating the tolerance in percent. Color coding shall be in accordance with the color code of table II. When either the first or second band of the three bands is gold, this band shall represent the decimal point for inductance values less than 10, and the other two bands shall represent significant figures. For inductance values of 10 or more, the first two bands shall represent significant figures, and the third band shall represent the multiplier. For small units, dots may be used instead of bands, when specified. The diameter of the MIL-identifier dot shall be larger than the other dots. The colors used shall be in accordance with MIL-STD-174. Typical color coding for units with inductance values less than 10 and for 10 or greater is shown on figure 1.

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries or 5 decades with 8 coils per decade. Inductance values are increasing in steps of appr. 50%. Either single layer or 3-pi universal winding is used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture and fungus-resistant varnish.

Phenolic Core Single Layer Windings

Dimensions of core: $\frac{3}{16}$ " diameter x $\frac{3}{4}$ " long. Leads are $1\frac{1}{2}$ " long.

Sub-Miniature R.F. Chokes

An extremely versatile series of iron core R.F. chokes designed to meet the industries' demand for high reliability, in miniature components. The coils are ideally suited to network and filter design, delay lines, and computer applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per J1 T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class of MIL-C-15305.

Medium Duty

Duo-Lateral Line Filter Chokes

Miller Duo-Lateral wound chokes combine small physical size with low distributed capacity—an essential requirement for radio interference filter chokes—and are characteristics found in no other type of radio interference filter choke. These chokes are particularly recommended to manufacturers of farm lighting plants, sign flashers, signal systems, oil burners, diathermy equipment and all types of intermittent switching systems. Miller Duo-Lateral wound filter chokes are specially designed for technicians and electricians who find it desirable to construct their own filters as a part of the equipment being fabricated. When used with amateur and commercial transmitters, constructed with Miller Duo-Lateral wound chokes will prevent back into the power line, thus eliminating carrier radiation within electrical wiring system. Miller Duo-Lateral wound chokes are wound on ceramic forms with suitable brass terminals.

Dual Line Filter Chokes

Miller Dual Duo-Lateral Line Filter Chokes are wound with two coils on one form, giving the advantage of small physical size in cases where space requirements are stringent and two single coils would occupy too much area. Identical in specifications, except for dimensions, to our single type Duo-Lateral chokes. They are wound on white ceramic forms 2" in diameter by 4 1/2" long.

The Miller Phono-Oscillator coil is used in the construction of radio operated phonograph players. The coils are permeability tuned and are assembled in an aluminum shield. The frequency range as provided by the adjustable iron core is from 540 to 700 KC. The windings are of the sectional duo-lateral type. The oscillator grid leak and grid coupling condenser are included in the coil assembly. A typical circuit diagram is supplied with each coil.

Heavy Duty Line Filter Chokes

Miller Heavy Duty Line Filter Chokes are wound on electrical porcelain forms measuring 4" in diameter by 8" long. All windings are of the duo-lateral type and use double cotton covered stranded cable expressly made for this purpose. Copper terminal lugs and brass bolts are used on all current-carrying parts. Four sturdy steel mounting brackets are provided with each choke. Windings are thoroughly impregnated with glyptal varnish and baked. In

addition to their use for radio interference filter applications, these chokes find wide application in power circuits and high voltage rectifier circuits to reduce the peak value of transient surges and thus protect valuable equipment and switch gear. High Tension Filter Choke

Through extensive research, Miller has developed what is believed to be the only satisfactory filter choke for the elimination of radio interference generated by high-tension (secondary circuit) neon sign animators and tubing. Chokes are sectional wound on 1/2" diameter by 2 1/2" long ceramic forms and are enclosed in a weatherproof bakelite shell. All windings are impregnated against moisture absorption and all hardware is cadmium plated. The #7875 choke is insulated for 15,000 volts and for continuous operation at currents up to 100 milliamperes. The filter chokes are easily installed in existing installations and they are fully guaranteed. Many cities and communities have radio interference ordinances and these chokes are

an indispensable part of every neon sign installation. Each installation requires one choke per circuit, plus one for the common circuit of the transformer and one for the common circuit of the animator. A complete circuit diagram is supplied with each choke.

Cash Register Filter

The radio interference produced by most cash registers and business machines, such as comptometers and billing machines, is, in many cases, quite severe and the general purpose type of filter does not always give adequate protection. The Miller Cash Register Filter has been expressly designed to meet the requirements of this type of equipment and will provide positive elimination of radio interference feed-back into the power supply line. The filter is of the two-section type and consists of four duo-lateral wound chokes and four .5 mfd. condensers.

Dimensions: 3 1/4" x 4" x 7" long.

TV and Appliance Filter

Similar in construction to the Cat. No. 7818, the Cat. No. 7815 is designed for use with larger household appliances and commutator-type motors as well as communications-type receivers and recording equipment.

Useful for elimination of

TV interference in radio receivers when inserted in television receiver line cord. The #7815 filter uses larger capacitors and heavier capacity inductors to handle load requirements up to 550 watts. It is assembled in a gray Hammertone finished case.

Dimensions: 2 1/4" square x 4 1/2" long.

Electric Shaver Filter

This filter contains an inductive-capacitive circuit consisting of two duo-lateral wound chokes and a non-inductive condenser, giving complete freedom from radio interference. No ground connection is needed for the filter and

the danger of accidental shock is avoided through the use of shock-proof, unbreakable moulded rubber construction.

TV and FM Wave Traps

These new high-Q series-resonant wave traps completely eliminate interference and undesired images in television and FM receivers. When tuned to the frequency of interfering signal, they are effective in reducing sound bars and herringbone patterns, or streaks and tearing in the television picture. Superimposed pictures from two different stations also may be prevented. For FM receiver cross-talk from interfering station is greatly reduced. Use of one of these traps generally

reduces interference caused by a near-by transmitter to a degree will permit satisfactory reception from a weaker station.

All-Wave Interference Filter

Designed to eliminate radio interference caused by small household appliances such as food mixers, sewing machines, vacuum cleaners, etc. When connected between the radio receiver and the power outlet, the filter prevents pick-up of interference signals through the wiring system. When used between household appliances the filter vents the interference energy getting into the house wiring and disturbing receivers through the neighborhood.

Capacity Type Line Filter

The Miller Capacity Line filter is a purpose filter for the elimination of interference caused by the operation of household appliances such as electric range, heating pads, hair dryers, food mixers, vacuum cleaners and practically all common household devices and fractional horsepower motors. This filter will provide adequate filtering in less severe cases of interference and in instances where the cost of Miller Inductive-Capacity type filters is not warranted. A bakelite receptacle at one end and foot long cord with plug at the other end makes installation simple.

Dimensions: 1 1/8" diameter x 2 5/8" long.

Fluorescent Lighting Filter Chokes

The interference energy which is fed back into the AC lines may often affect the operation of radio and television receivers within a radius of several hundred feet. This interference energy may be absorbed by the use of suitable filter chokes and condensers. Resinite Adjustable R.F. Coils

Resinite is a phenolic impregnated tubing which combines the mechanical and dielectric advantages of phenolics with the high dielectric strength, moisture resistance, and non-corrosive properties of cellulose acetate. Resinite can be certified to MIL-P-79B Type PBG. This series features extremely wide choice of inductance ranges and utilizes only the highest quality commercial materials throughout. They find application where the severe moisture resistant characteristics of encapsulated units and the mechanical properties of the ceramics are not required.

Encapsulated Adjustable R.F. Coils

"UNISEAL," a recent development of the J. W. Miller Co., has successfully been applied to the production of encapsulated adjustable R.F. inductors. The primary difficulty encountered in the encapsulation of adjustable inductors is the prevention of moisture entering the coil form around the threaded stud. The moisture being subsequently absorbed by the coil form results in deterioration of coil efficiency. Miller has overcome this in "Uniseal" by using a molded epoxy shell open on only one end. To provide a smooth turning core the shell is filled with a silicone grease. The brass bushing holding the adjustable core is then bonded to the open end and the assembly inserted into another epoxy shell which is then filled with epoxy resin. This forms one solid mass of epoxy from the inner coil form to the outer shell. The unit is impervious to moisture and is extremely shock and vibration resistant.

Shielded Subminiature Adjustable R.F. Coils

These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

Dimension: $\frac{1}{2}$ " sq. x $\frac{5}{8}$ " high. *Minimum self resonant frequency measured at maximum inductance.

Sub-Miniature Adjustable R.F. Coils

The following permeability tuned coils wound on silicone impregnated ceramic forms will find many applications where space restrictions rule out the use of the larger size coils in the 4400 and 4500 series. These coils mount by means of a bushing which requires an 11/64" hole.

Dimensions (form): 3/16" diameter x 5/8" long.

Standard Adjustable R.F. Coils

This series of variable inductors offers a higher Q coil with a slightly larger inductance range than can be obtained in either of the two smaller series. The same high grade silicone-impregnated ceramic forms are used in their construction to insure a product of high quality. These coils mount by means of a bushing that requires a 1/4" diameter mounting hole. Hardware consisting of nut, lock washer, and spring clip is supplied.

Dimensions (form): 3/8" diameter x 1 1/16" long.

VIEW from Nytronics - The Wee-Chip Inductor Designed for Micro Circuit and Hybrid Applications

Wee-Chip Inductor is a magnetically shielded miniaturized inductor made especially for mounting on substrates. The inductor body is of high stability, low loss ferrite, combined with a coil cavity of optimum cross sectional area, and an air gap radius produces a unit having excellent "Q" factor. The top terminations are of the wrap-around type for the best degree of mounting flexibility.

NEW! The Wee-Bit

(Nytronics Delay Line Sections)

Unique sectional construction available utilizing individual pre-designed Wee-Bit Pulse Delay elements.
48 hour delivery not 8 weeks.
No tooling expenses.

The WEE-BIT offers the advantage of assembling a unique sectionalized delay line that reduces delivery on prototype delay lines from weeks to days and eliminates expensive tooling and design efforts. Consisting of pre-designed LC sections called Wee-Bits, a discrete value of delay time is offered. The aggregate number of Wee-Bits determines the total delay time and is a function of delay to rise time ratio. An assembly is made of selected Wee-Bits mounted on printed circuit boards that conform to MIL-P-13949B, stacked or single layer and permits increment of delay to be tapped without disturbing uniform pulse shape. Wee-Bit size 0.401" long by 0.625" wide by 0.230" height and are epoxy molded to meet environmental conditions of MIL-C-15305C. Temperature range -55°C to 125°C , 300 VDC working voltage. Delay time available per Wee-Bit from 10 nanoseconds to 100 nanoseconds in 10 nanoseconds increments. Wee-Bits also stocked with 200 nanoseconds delay. This unique wee line sectionalized delay line concept allows reduction of approximately 40% in number of sections ordinarily required*, flexibility of design, and line tapping.

PHYSICAL CHARACTERISTICS

UTC's new MS series of high Q coils are only .23" high x .35" diameter. The low profile makes them ideal for high-density packaging requirements. All coils are molded in black epoxy.

Base diameter (.35") and lead spacing (.2") fall within TO-5 envelope dimensions.

Leads are .025" diameter gold-plated dumet, type D per MIL-STD-1276A, and are both weldable and solderable.

Q CHARACTERISTICS

Excellent Q in the 10 kHz to 50 kHz range, matching and often exceeding the performance of much larger units. Designed for application over the wider range of 1 kHz to 100 kHz. See Q Response Curve.

MIL SPECS

All units have been designed, manufactured and successfully tested to complete MIL-T-27C environmental requirements. MIL Type TF5RX20ZZ.

TOLERANCE AND TEMPERATURE STABILITY

MS units have an inductance tolerance of $\pm 2\%$ at 0.1V RMS, 1 kHz, 0 DC, 25°C. All have excellent inductance stability with temperature: less than $\pm 2\%$ from -55°C to $+105^\circ\text{C}$.

NEW "FE, FI, FO" MINIATURE INDUCTORS

Designed, Manufactured and

MIL-T-27C Specifications

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 kHz. The FO units are adjusted at 1 V, 400 Hz. All units are adjusted to a tolerance of $\pm 1\%$. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from -55°C to $+100^\circ\text{C}$. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units Mil Type: TF5RX20ZZ.

HIGH Q PRECISION INDUCTANCE DECADE

Invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base. Not to MIL-T-27C.

HIGH Q TOROID INDUCTORS

Favorites for over fifteen years, UTC HQ Toroids are only excelled by the preferred new "M" series. As typical Q curves show, HQ coils are available for application from 100 Hz to 100 kHz. Adjusted to 1%, the inductance is virtually independent of frequency, temperature, and vibration. Voltage stability is excellent, and shielding case assures 80 db coupling attenuation. Hermetically to MIL-T-27C. All units MIL type TF4RX-20YY.

JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

LUNAR MODULES!**

NEW!

Precision aluminum casting.
Adaptable for back lighting.
With slip clutch features
similar to K1375 (see below).

"PRESS-TO-TURN" KNOBS

For Low Torque Applications

Knobs spin freely . . . and **MUST BE PRESSED-IN** while making changes. Developed specifically to prevent inadvertent changing of settings.

For basic dimensions, see our "De-luxe Instrument Knobs" on page 18. (9, 12, 17 and 22 body diameter series).

When ordering, be sure to substitute prefix "I" for 90 Series and "O" for 175 Series, as per typical part nos.

SLIP-CLUTCH With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For 1/4" Shafts)

For driving devices such as variable capacitors, inductors, potentiometers, etc., the "slip-clutch" automatically disengages and slips when the pre-determined torque has been exceeded. Knobs are fluted, and are equipped with either fixed or retractable spinner for fast turning. Backlash-free units safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

*Normally set for 3-6" lbs. Can be modified for other requirements.

JAN HARDWARE

MANUFACTURING COMPANY, INC.

RELAY SOCKETS with Fixed or Removable Contacts!

Jan's relay sockets are specifically designed for use with plug-in relays . . . in electronic circuit applications which demand quick and easy assembly and maintenance.

Available with dip-solder pin terminals for printed circuit assembly, or solder cup and turret terminals for direct wiring. For applications requiring removable contacts, solderless wire crimp terminations are available for #16, 20, 22, or 24 AWG wire sizes.

A variety of mounting styles are offered including . . . tapped

inserts with studs for top chassis mounting; thru hole; or tapped inserts with removable standoffs and screws for mounting on either side of chassis or panel. Unexpected disconnect because of vibration is eliminated by fastening the relay to the socket. Polarization dots and/or index holes (optional) aid in plugging in relay correctly. Socket contact material is spring tempered phosphor bronze gold plate over silver plate. Body material is Diallyl Phthalate, fiberglass filled per MIL-M-19833.

BUSHING MOUNT

This unit consists of a pendulum suspended on two low torque bearings. Attached to the pendulum is a wiper arm which wipes against the sector potentiometer element attached to the case. The voltage output of the potentiometer is proportional to the angular displacement of the case from a vertical reference. The mechanisms are hermetically sealed in silicone oil which acts as a damping

Typical applications include: pitch angle detection of torpedoes, railroad track level sensing, directional sensing in automatic remote mining equipment, level sensing of missile launchers, and machine tool control systems.

- NOTES: 1. Alignment: Axis X-X and surface "A" to be parallel within $\pm 1/4^\circ$
2. C.W. and C.C.W. directions refer to the case rotation from neutral (axis X-X) when the unit is viewed from the terminal end.

"Type Tube Sockets WITH RETAINER RING MOUNTING

These quick-mounting sockets use no screws or rivets; they are securely held by the retainer ring and can be easily inserted with a screwdriver or AMPHENOL hand tool 51-3. "Type" sockets may also be used with plug caps to make high quality, low cost cable connections.

CHASSIS THICKNESS. Unless otherwise specified, "Type" sockets are grooved to fit 22 gauge (.031") to 18 gauge (.050") panels or chassis. This standard grooving also allows plug caps. They can be grooved to fit up to 13 gauge (.093").

78 Series Miniature Sockets WITH PC OR WIRE WRAP TERMINATIONS

To meet customer requirements for low cost terminations, Amphenol introduces miniature sockets for PC board mounting and Wire Wrap termination. These sockets can be used for vacuum tubes, relay input or output cable connections and many other circuit requirements where standard size sockets won't fit. Performance is equal to larger sockets; general purpose or mica-filled dielectric available. Wire-wrap termination type mounts in 5/8" diameter round or shaped panel cut out; friction-type retainer ring included. PC board types mount through 1/16" diameter holes in PC board arranged in proper pin circle diameter as shown (view "A"). Contact shoulders prevent socket from bottoming, allow clearance for air circulation and cleaning.

Single Contact

Standard with leading manufacturers for many years. Widely used also on amplifiers, transmitters, phono-electric devices, home recorders, PM speakers, headphones, theft alarms and coin operated devices.

Unbreakable shielded cable type connectors of chrome plated, machined brass. The threaded ends engage with the coupling rings to make a positive, noise-free, leak-proof connection by pressing the center contacts firmly together. Spring cord protectors accommodate cables up to $\frac{1}{4}$ " diameter. Receptacles mount in .385" holes when grounding to chassis; mount in .500" holes for ungrounded two-circuit applications. Can be screwed into housing or stand with standard $\frac{3}{16}$ "-24 tapped hole.

Miniature 75-1, 75-2, 75-3

SPECIFY ASTROplate — for BRAWN and BEAUTY in RF Connectors

BECAUSE ASTRO PLATE IS SPACE-AGE NEW!

For years the industry has searched for a tough finish to replace silver plate in commercial instrumentation, communications equipment, cable connections and the countless applications there are for RF connectors. Today's applications demand the advantages of precious metal without its softness and susceptibility to corrosion. Now it's here—developed by Amphenol—world leader in RF connectors. *It's a totally new finish.*

Astroplate — better than silver

Exclusive, new, non-tarnish finish meets or exceeds latest MIL-C-312 requirements. Under salt-spray tests (per MIL-Std. 202), Astroplated components have been exposed to over 400 hours without evidence of corrosion. Samples have undergone many times the standard four-hour potassium sulfide exposure without showing tarnish. Under the same conditions, silver tarnishes in less than one-half hour. Excelling also in abrasion resistance, Astro-plate measures between 200 and 350 on the Vickers Hardness Test vs. 70 to 155 for silver plate. Ideal for high temperature applications, Astroplate withstands over 2500°F.

Precision 7mm Connectors — APC-7

APC-7. Precision 50-ohm connector for use with 7mm (inner diameter of outer conductor) rigid air line and semi-rigid (ALJAK) coaxial cable.

Sexless coupling permits interconnection of any two APC-7's. Identical plane of electrical and mechanical contact permits accurate determination of the electrical length of a mated pair or an air line assembly with a connector at each end. All components held captive.

Connectors packaged in pairs in protective wooden box; assembly instructions and certified SWR test report included with each pair.

Specifically designed for microwave and precision test equipment—Component manufacturers now using APC-7 fittings include: Alford, Alfred, EG&G, Hewlett-Packard, Maury Microwave, Microlab/FXR, Narda, PRD, Rantec, and Weinschel Engineering.

CHARACTERISTICS (TYPICAL)

ELECTRICAL (for mated pair): Impedance: 50 ohm $\pm$ 0.1 ohms. Frequency Range: 0.1 to 18 GHz. SWR: 1.039 max. to 18 GHz. Insertion loss (in db): $< 7 \times 10^{-3}$ V Freq. (example: 0.028 db at 16.0 GHz). RF Leakage: $<$ signal inside coaxial line ratio > 120 db. Electrical length: 0.723 ± 0.001 inches (1.836 $\pm$.00254 cm). Contact Resistance: Inner: < 1.0 milliohm, outer: < 0.1 milliohm. RF Leakage: Until satisfactory test methods are developed, the maximum frequency of measurement is limited to 6.0 GHz.

ENVIRONMENTAL: Thermal Limits: storage: -67° to 158° F (-55° to 70° C) Operating: 55° to 91° F (13° to 33° C). Humidity: 20 to 80% RH. Pressure: 590 to 7 mm Hg. MECHANICAL: Mating: sexless, coplanar by means of threaded ring fixed within coupling nut. Life: > 5000 connect/disconnect operations.

MATERIAL: Coupling Mechanism: stainless steel. Body: gold plated beryllium copper. Center Contact: gold plated beryllium copper. Bead Assembly: Rexolite insulation.

Astroplate — interchangeable with silver

Fully compatible, Astroplate presents no galvanic corrosion problem when mated with silver, and its tested solderability (MIL-Spec QQ-S-365) is equal to that of silver.

Series MB

Small bayonet-lock connectors with an overall length that, with a few exceptions, measures under an inch. Of particular importance to the user are the excellent electrical and mechanical performance parameters offered at low cost. Crimp designs required require no special crimping tools; a simple pair of standard pliers will do the job. Plugs in this series have female contacts; jacks have male contacts. For further information, request catalog CC-6.

CHARACTERISTICS, typical

ELECTRICAL: Impedance: non-constant; frequency range: 0-500 MHz. Voltage: 500 v. peak.

ENVIRONMENTAL: Thermal limits: Kel-F: —67° to 390°F (—55° to 199°C); Nylon: —67° to 300°F (—55° to 149°C). Weatherproof: all MB series are weatherproof. Hermetic seal: pass helium leak test of 2×10^{-8} cc/sec.

MATERIALS: Mating: 2-stud bayonet lock. Cable affixment: hooded, jacket or standard braid clamp and nut; inner jacket crimp.

CONTACTS: male: brass; female: beryllium copper. Other metal parts: brass. Plating: all metal parts except contacts: except as noted, .0001" min. per QQ-N-290. Contact plating: except as noted, .0002" min. Insulators: as noted, Kel-F, nylon or teflon.

BNC/TNC

BNC's are small, lightweight, quick-disconnect bayonet lock coupling connectors. MIL-Crimp BNC's are recommended as the optimum BNC, giving optimum operating performance at low installed cost. Using standard crimping tools, these units can be assembled in a fraction of the time usually required for braid-clamp type connectors by eliminating critical assembly and soldering operations and reducing the parts to handle. Captivated center contacts prevent circuit discontinuity under environmental or mechanical stress. MIL-Crimps are weatherproof; their constant 50-ohm impedance provides excellent performance through X-band frequencies.

Quick-Crimp: gold-plated semi-captivated contacts, classed as weather proof. Heat shrink tubing for severe environmental conditions. **Original-Crimp:** gold-plated contacts, classed as weatherproof. Each has a silicone rubber boot.

BNC/TNC CONTINUED

These connectors were developed by Amphenol for use in missile and other applications in which extreme vibration may be encountered. The TNC threaded coupling mechanism eliminates "rock" under vibration and is characteristic of bayonet coupled connectors such as BNC that introduces misalignment into the system and causes erratic performance. Other than coupling, TNC's are dimensionally and electrically similar to BNC, and have a constant impedance of 50 ohms.

Due to its rugged mechanical construction, the TNC is them an excellent choice for applications requiring a high degree of vibration resistance.

 medium-size, weatherproof, threaded coupling units that may
 be used in systems up to microwave. This series was the origi-
 nal microwave connector developed during World War II and
 is consistently low across this broad frequency spectrum.
 Available in Regular, Improved and Improved/Captivated
 contact constructions and have the MIL-Crimp/MIL-Clamp
 design to MIL-C-39012. For further information, request
 Coaxial Connectors Catalog CC-6, or contact your distributor.

AMPHENOL

THE BUNKER-RAMÓ CORPORATION

Series HN

Amphenol HN Series are constant 50 ohm impedance connectors designed for high voltage applications. Connectors are weatherproof and are available in Regular, Improved and Improved/Captivated Contact constructions.

Amphenol's patented Captivated Contact Design prevents possible contact recession under temperature extremes. Contacts are fixed within the connector body by front and rear contact insulators butt against metal body parts.

CHARACTERISTICS, TYPICAL

ELECTRICAL: Frequency range: 0 — 4GHz. Voltage rating: 1,500 V peak; dielectric withstanding voltage: 5,000 volts rms. IEC 113.

ENVIRONMENTAL: Thermal limits: Teflon insulation: —67° to +250° (—55° to 199°C); Rexolite insulation: —67° to 185°F (—50° to 85°C). Weatherproof: all HN Series are weatherproof. Seals: pass helium lead test of 2 x 10⁻⁸ cc/sec. Insulation: Compression seal.

Mechanical: Mating: 3/4" — 20 threaded coupling. Cable affixation: screw-thread nut and braid clamp.

Materials: Contacts: male: brass; female: beryllium copper; body: brass; other metal parts: brass. Plating: .0002" silver min. Insulators: Teflon, Rexolite, glass-Teflon (hermetic seal). Weatherproof gaskets: synthetic rubber; silicone rubber.

MILITARY SPECIFICATIONS: HN Connectors meet applicable specifications of MIL-C-3643.

RF COAXIAL CONNECTORS

AMPHENOL
 THE BUNKER-RAMO CORPORATION

Series UHF

Series UHF are low-cost, general purpose connectors for use in a wide variety of/lower frequency applications (up to 300 mc) where constant impedance is not necessarily required. Available in small and large body sizes, they have a peak voltage rating of 500 volts.

While most UHF connectors have conventional solder-type cable affixment, Quick-Crimp UHF feature Amphenol's patented hex crimp design which permits faster, easier and more reliable assembly.

The 83-850 and 83-851 plugs eliminate one or both of two common soldering operations in assembly. The 83-850 has completely solderless braid and contact assembly; the 83-851 has solderless braid assembly.

PRINTED CIRCUIT EDGE CONNECTORS

PRECISION MILITARY AND COMMERCIAL PRINTED CIRCUIT BOARD EDGE CONNECTORS

These Cinch printed circuit connectors are designed for minimum printed circuit card wear, low insertion force and positive contact with the printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with a minimum of 30 micro-inches thickness gold plate. Units with solder tab or dip solder terminations utilize bifurcated contacts permitting two flexing surfaces instead of one for positive contact. Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Types meeting Military Specification MIL-C-21097B are also available as indicated. These connectors have beryllium copper contacts with 50 micro-inches gold finish.

D-SUBMINIATURE CONNECTORS†

The Cinch D Subminiature Connectors are designed for applications where space and weight are prime considerations. These high contact density connectors are especially well-suited for aircraft, missile and ground support installations. Although designed essentially for rack-and-panel installations, D series connectors may be adapted for cable attachment by means of accessory junction shells with integral clamps.

In addition to the original D series with two-piece insulators, Cinch offers Golden D and MARK III ROYAL D connectors utilizing monobloc insulators. The Golden D connector is available with either crimp-type, snap-in, removable contacts or standard solder pot contacts. MARK III ROYAL D connectors have the "Little Caesar" rear release contact assembly. Contacts are inserted by hand and extracted at the rear of the connector with a simple plastic tool. The "Little Caesar" contact assembly was selected by the National Aerospace Standards Committee for vital programs demanding great operational reliability.

All D Subminiature connectors will inter-mate if insert arrangements correspond. These connectors are designed to meet or exceed most of the requirements MIL-C-8384 Rev. B.

Combination layouts are supplied with unfilled coaxial and/or HV contact cavity. Coaxial and HV contacts must be ordered separately, and may be used interchangeably in any of the layouts listed. HV contacts accommodate wire sizes to #20. Coaxial contacts (with crimp or solder type terminations) and HV contacts are snap-in and removable. Solder type coaxial and HV contacts have captive center contacts.

Royal D, Mark III and Golden D, Mark II contacts use crimp tool MS-319. Extraction tool 599-11-11-150 is supplied with each Royal D, Mark III commercial connectors; insertion-extraction tool 599-11-11-165 is supplied with each military connector.

For detailed test data and technical information see Cinch Catalog CM-46.

Connectors Individually Packed in Heat-Sealed Containers to Assure Extended Shelf Life

To protect D-Subminiature connectors from contamination and other corrosive elements in the air, Cinch individually packs each connector in heat-sealed polyvinyl-chloride containers (as shown) with an inert gas, oxygen-free atmosphere. This assures every customer of extended shelf life. A separate compartment is also provided in each container for the loose crimp-type contacts supplied with the Golden D, Mark II connector.

HINGE CONNECTORS AND ACCESSORIES

Cinch hinge connectors eliminate contact damage caused by high insertion and extraction forces.

Caps are available, furnished with liners and cable clamps. For more secure locking, an alternate lock with a hook fits into a cutout in the cap. If the alternate lock is required, order Part No. 37AL.

The castings are black phenolic, type CFG. Contacts are phosphor bronze, cadmium-plated (.0001). Caps are finished in black wrinkle and the cable clamps are nickel-plated. Liners are formed fibre.

"JONES" PLUGS and SOCKETS — 300 SERIES

300 series plugs and sockets feature MONOBLOCK construction. S-302-AB socket (two-contact plugs and sockets are round, and all others are rectangular). eliminates internal moisture traps. MONOBLOCK's patented* snap-in socket contacts permit external wiring, plus removal and replacement of individual contacts if necessary. Contacts are "locked-in" to prevent bending and wiring stress. MONOBLOCK plugs and sockets are compatible with the old two-piece types.

Patent nos. 2688123 and 2980881.

ELECTRICAL SPECIFICATIONS

All connector ratings are based on a continuously mated condition. "Rated Voltage" is $\frac{1}{2}$ of Voltage Breakdown.

Rated Voltage 730 Volts rms. Contact Resistance016 Ohms max. Under most normal operating conditions where not all contacts are carrying substantially full rated current, maximum current per contact is rated at 10 amperes. The Jones 300 series plugs and sockets are recognized under the Component Program of Underwriters' Laboratories, Inc. In accordance with UL Standard #498, the Underwriters' Laboratories ratings are derived from the condition whereby all contacts are carrying "rated" current simultaneously. The resultant ratings are as follows:

Rated Current

(2-12 contacts) 7.5 amperes
(15-33 contacts) 4.5 amperes

Rated Wattage

(2-12 contacts) 1875 watts
(15-33 contacts) 1125 watts

400 series and 2400 series plugs and sockets are suitable for cap or panel mounting. Plug prongs are cadmium plated brass. Caps are finished in black wrinkle and equipped with a fibre lining. 400 series and 2400 series plugs and sockets are interchangeable. A special bracket, Type 46, is supplied for mounting the 2-contact angle bracket (AB) type socket to a panel or chassis.

Series 2400 plugs and sockets have recessed pockets with barriers around the contacts, both on the mating side and the solder connecting side. A shoulder extends around the face (mating) side of both plug and socket presenting a finished appearance when mounted in bracket or cap. Angle brackets can be ordered as specials for the 2400 Series.

TERMINAL BLOCKS and ACCESSORIES

The Jones barrier terminal blocks are made of molded phenolic. Eyelets and screws are nickel-plated brass and terminals are hot solder dipped brass. Fibre or phenolic marker strips are available for all barrier blocks. Barrier blocks are available in standard terminal configurations as shown. Optional terminals are available as indicated by the Y, W, or $\frac{3}{4}$ W suffix on the part numbers in the charts.

The standard terminal block with binder head screws can be used for wire or special terminal attachment.

$\frac{3}{4}$ W terminals are available for solder attachment of wires on one side of the terminal block. W terminals are available for solder connection of wires to both sides of the terminal block. (Available as standard on 172 series; special order on others.) Y terminals are available for solder connection of wires underneath the terminal block.

SERIES 500

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. A top-mounted marker strip can be furnished as described on page 522.

BARRIER BLOCK ACCESSORIES

MARKER STRIPS

FOR STANDARD "W" OR "3/4W"
TERMINAL BLOCKS

FOR "Y" TERMINAL BLOCKS

Marker strips identify terminal positions on barrier terminal blocks and insulate exposed portions of terminals from a conductive mounting surface. Marker strips for Series 140 thru 152 are $\frac{1}{32}$ inch thick vulcanized fibre and mount under the terminal strip.

Marker strips for 500 Series blocks are made of Bakelite $\frac{1}{16}$ inch thick and mount on top with drive screws that are provided.

One-eighth inch white numerals standard. Also available unmarked for insulating purposes only.

INTEGRATED CIRCUIT SOCKETS

IC sockets are ideal for testing and prototype purposes as well as production applications. Convenient and dependable, these sockets reduce possibility of damage to leads and hermetic seals. Cinch IC sockets provide positive electrical contact and low contact resistance. They offer excellent resistance to corrosive atmosphere and to extremes in temperature and humidity.

PRECISION D.I.P. SOCKETS

These sockets combine high contact retention with low contact resistance and environmental stability. They accept standard 14, 16 and 24-pin dual-inline packages having round or flat leads. (Standard spacing is .300" between lead rows, .000" between lead centers.) Socket leads are on the same centers as the IC itself. This feature allows easy installation of the socket in PC boards designed for direct insertion of the D.I.P. Choose between diallyl phthalate insulator with gold plated beryllium copper contacts or GP black phenolic insulators with electro-tin plated beryllium copper contacts.

MATERIALS

MATERIALS: GP Black Phenolic per MIL-M-14, type CFG Diallyl Phthalate per MIL-M-14, type SDG; CONTACTS: Beryllium copper with gold or electro-tin plated. RECOMMENDED MOUNTING METHODS: CHASSIS: 4-40 x 1/4" Fillister screw; P. C. BOARD: Solder in.

ELECTRICAL SPECIFICATIONS

CURRENT RATING: 1.0 ampere; CONTACT RESISTANCE: 6 milliohms (at 1 ampere); CAPACITANCE PER MIL-STD-202: Method 305 at 100 KHz between adjacent contacts: 0.33 pfd average (phenolic), 0.28 pfd average (diallyl phthalate), even opposing contacts: 0.12 pfd average (phenolic), 0.10 pfd average (diallyl phthalate); WITHSTANDING VOLTAGE BETWEEN ADJACENT CONTACTS: 1000 VRMS; INSULATION RESISTANCE: 1.0×10^6 megohms minimum (phenolic); 10^7 megohms minimum (diallyl phthalate).

MECHANICAL SPECIFICATIONS

CONSTRUCTION: Per MIL-STD-202C, Condition D, Method 204A, 10-2000 C.P.S. at 1/2" or .060" double amplitude. No continuity interruptions of 1 microsecond or longer. No damage to contact or insulator. No disengagement of module from the socket; SHOCK: Per MIL-STD-202C, Method 202B/3 blows of 3 mutually perpendicular planes. Shock level of 150 G's. No continuity interruptions of 1 microsecond or longer. No damage to contact or insulator. No disengagement of DIP module from the socket; TEMPERATURE: Phenolic: -65° to 150° C.

NURL-LOC DESIGN — TERMINALS AND TEST JACKS

Electronic Molding offers the largest variety of molded insulated terminals and test jacks available anywhere. The metal inserts are molded into high-temperature Diallyl Phthalate, (500°F) forming a strong integral unit that will not crack while soldering. The metal to metal Nurl-Loc press-in feature (shown left) assures highest radial and axial pullout resistance of any terminal of this type. Ten colors are available, in a wide range of types for various applications, many designed to meet military specifications, plus mounting tools.

The finest grade laminated phenolic sheets we use in our production fabrication are available to you in a range of standard sizes or special sizes cut to order; and in a variety of types.

NEMA GRADE XXXP-MIL-P-3115C, paper base electrical-color natural. Most commonly used for panels and terminal boards. Excellent electrical grade and dimensional stability. Max. operating temp. continuous 250 deg. F.

NEMA GRADE G-10, MIL-P-18177B-GEE, color green **GLASS CLOTH EPOXY**. Superior chemical resistance, excellent mechanical and electrical properties. Max. operating temp. continuous 300 deg. F.

COPPER CLAD LAMINATES, XXXP MIL-P-13949 TYPE PP and GLASS EPOXY MIL-P-13949B TYPE FL-GE, are used mainly for printed circuitry. The copper foil serves as the conductor and the laminate provides the insulating support. 2-ounce copper foil is laminated to one or both sides of the insulator. We catalog both types in XXXP and G-10.

FIBERGLASS REINFORCED POLYESTER NEMA GRADE GPO-1 with a class 155C (300°F) rating. Color is Tan. Excellent mechanical and electrical properties. Fabricates similar to Phenolic and can be punched cold.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028

Trademark

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do... on printed circuits, in tight spots and on terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up strain on the smallest terminals. Ample 1/4" jaw spread. 1 1/2" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that it stays covered whether open or closed.

TELLURIUM
COPPER LEADS
FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed to use with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper gold plated spade lugs cold-staked to multi-stranded

12 gauge CUPPER wire minimize thermoelectric effects—an absolute necessity for low voltage, high precision measurements.

LOW RESISTANCE—12 gauge multi-stranded CUPPER wire results in extremely low cable resistance. Spade lugs plated with 50 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts. (Less than 0.01 $\mu\text{V}/^\circ\text{C}$).

PRESS-FIT® TEFLON* CLOVERLEAF® RECEPTACLES

... providing the economies of dip-soldering with the inherent reliability of wired chassis construction

The "Press-Fit" Cloverleaf Receptacle provides economical yet uniformly perfect solder joints by means of dip soldering on a metal chassis. The unique Cloverleaf configuration permits insertion of four or more wire leads, plus an optional center post for mounting additional components after the dip-soldering operation. This design provides an encompassing hold on the leads, while providing for excellent capillary flow of solder. The Cloverleaf receptacle is a Seaelectro "Press-Fit" design. Virgin Teflon

insulation, precisely machined to "Press-Fit" into the chassis providing fast, positive and economical installation.

The reliability of dip solder joints made with the Cloverleaf receptacle combined with the inherent dependability and repairability of wired chassis construction makes it ideal for use in high density, compact electronic instrumentation packaging, while the low cost of the terminals and its simple installation provides a new and outstanding assembly technique for premium quality radio and television manufacturing.

PRESS-FIT® TEFLON** SPACER/BUSHINGS

The Newest and Best Way to Mount P.C. Boards to Metal Panels and Chassis

Mount and insulate P.C. boards on metal chassis or panels without nuts, bolts, or lock washers. The new Press-Fit Teflon* Spacer/Bushings save assembly time while providing an economical and mechanically secure mounting device.

Machined from pure Teflon*, these new units are designed for various thickness P.C. boards and chassis or panels. Insertion in the chassis is a simple, one-step operation. The grommet end of each Spacer/Bushing is simply snapped in pre-drilled or punched metal chassis holes with entrance edge broken. Once inserted, they're in for good. P.C. boards require only mating holes for the opposite end of the Spacer/Bushing and may be snapped on and off of the mother board at will.

NOTE: Mtg. Hole $\pm .152 \pm .002$ Dia. in $\pm .062 \pm .006$ thick chassis.

Performance, whether measured in function, reliability, life or costs, cannot exceed the performance parameters of the components involved in the equipment. This basic fact was recognized by Sealectro in 1952 and led to the design, development, and introduction of the Teflon insulated "Press-Fit" terminal as a superior performance component, providing greater reliability, better electrical connections, and improved cost factors on the production line. These outstanding features have established Sealectro as the leading supplier of Teflon insulated terminals throughout the world.

The units described in this catalog are available for the off-the-shelf delivery from your local authorized Sealectro distributor to provide you with the fastest possible delivery and shortest lead time requirements. If additional information or terminal configurations other than those listed are required, Sealectro's distributor, field representative, and factory personnel are at your service.

NEW! For chamfered or non-chamfered holes

Riv-Loc® INSULATED TERMINALS

These terminals overcome all the inherent shortcomings of the older semi-assembled design which assembles by pushing the metal lug into the hole of the Teflon bushing. Whereas the original semi-assembled design depended upon the mass of the metal lug displacing the Teflon, Riv-Loc employs a simple **Riveting and Locking** of the Teflon bushing giving a better finished installation.

Installation is in one simple, smooth operation with all insertion forces working together, instead of against each other as in the case of the previous semi-assembled design. Thus, the final seating and locking of the terminal in the chassis is uniform, even with wide parameters of hole settings.

In millions of installations, Riv-Loc not only offers far superior mechanical characteristics, it also has proved more dependable electrically. The smaller metal lug mass in proportion to the Teflon bushing provides extra dielectric strength. This extra protection of pure virgin Teflon insulates the dependability and performance of your equipment.

Numbers listed here are currently considered standard. However, new numbers are being added constantly. Virtually any terminal configuration requirement can be met with the Riv-Loc concept. Submit your requirements to Seaelectro.

TRANSISTORS AND IC HARDWARE

SOCKETS AND HOLDERS

Low cost, high precision sockets and holders for transistors and integrated circuit packages are now available with virgin Teftlon bodies that Press-Fit into chassis. The Sealectro Series 60 Sockets permit you to plug-in and remove various TO-18, TO-5 can and I.C. packages at will. The precise contact design provides a positive mechanical grip while making electrical contact with minimum resistance. Sealectro offers a complete off-the-shelf line. Write for catalog.

BUSHINGS AND PADS

Included in the Press-Fit line of Transistor and I.C. Hardware is a complete selection of Teftlon bushings and pads to fit virtually every transistor and I.C. package. Press-Fit or grommet style bushings which provide support for transistor can or thru chassis hole for leads are offered. Pads to relieve strain on glass seals are also available. They are designed for use where semiconductor units are wired directly into the circuit and to insulate it from the mounting surface. Write for complete catalogs.

SEAELECTRO PROGRAMMING DEVICE

SEAELECTRO PROGRAM SWITCHING

SEAELECTROBOARD™ MODULAR CORDLESS PROGRAM BOARD

"Sealectroboard" programming and switching provides complete ease and simplicity of operation with drastic reductions in hardware and space. The units consist of two decks of bussed contacts running at right angles to each other in the X and Y directions, forming an electrical matrix. A single shorting or component holding pin is used to complete the program circuit... move the pin to a new location and a new program function is generated.

The "Modular Sealectroboard" provides an extremely flexible means of program system expansion with a built-in appearance. The system consists of only four standard component assemblies, designed such that when installed in a standard E.I.A. 19" relay rack, or bench cabinet, they result in a very attractive unit.

The "Modular Sealectroboard" can be expanded from a 10 x 10 hole matrix to a 10 x 60 hole matrix in one standard 5 1/2" x 19" rack panel. Additional panels can be added and interwired to expand program capacity as system requirements dictate.

SLIDE 'N SWITCH RANDOM ACCESS PROGRAMMING CIRCUIT SELECTOR

- Exclusive random access to any circuit from any circuit.
- Up to 10 times as fast thumbwheel switches.
- Modular expandable design.
- Compact, 2 5/8" high. Each switch module 1/2" wide.
- Economical. Costs far less than average thumbwheel switch.
- Guaranteed for 250,000 operations per contact minimum.**
- Terminates in standard PC card connector, or hard wire.

An entirely new and different switching concept with maximum versatility built-in, Slide 'N Switch provides direct choice of output circuit without switching electrically through intermediate points. While in transit, the common side connected through a termination on the rear of the unit to indicate the "in transit" situation or it can be used as an electrical interlock.

This precision switch can be set in a fraction of the time required for thumbwheel units, as the handle is simply pulled out and swung in a single movement to the desired circuit.

Terminations on the rear of the switch module are printed circuit, spaced .125" center to center, and will mate with standard edge-mount pc card connectors. Terminal holes are also provided for hard-wiring with solder joints.

Completely modular, the switch modules are mounted on a threaded rod in any number desired. End caps complete the bezel for front panel mounting.

- Sets up in seconds with 100% repeatability

- 15 Amp contact rating

*Low Cost Timer

Here's the answer to those many timer and programming problems. A unique combination of complete field adjustability, 100% repeatable, and multiple ON/OFF function. No loose parts. No changing of cams. Everything required for complete flexibility in a single, compact, economical unit designed for extra-long life.

60 drum positions, precisely fabricated in a factory, permit up to 60 ON/OFF function in a single 360° operation on a single contact. The drum is indexed, eliminating guesswork in set-ups, and also guaranteeing 100% repeatability when re-setting to a former program.

Actuators are merely slid by hand, to or out of operational position. In seconds, set up a complex timing program with varying time dwells for ON/OFF functions. In seconds set up a pulse generator capable for supplying precisely timed pulses in various groups. And all this costs no more than ordinary overlap type cam timers that provide a single ON/OFF function.

"MULTI-SLIDE" SWITCHES

SERIES 39000

Revolutionary compact switching method provides versatile multiple station slide switching. Allows 1 to 18 stations per row standard on all but all-lock function which is limited to 12 stations. Requires only $\frac{3}{4}$ " depth behind panel. Narrow frame design permits mounting on compact electronic equipment without sacrificing versatility or function. Three standard functions available: **Interlock:** actuating slidebutton automatically restores previously actuated station to normal. Only one slidebutton can be actuated

at a time with standard interlock function. **Nonlock:** each station has momentary action with no interaction between stations. **All-lock:** all stations, except release, lock when depressed—restore to normal when release button is actuated. Special slide-to-release cancelling feature in interlock and all-lock frames permits immediate correction of switching error without cancelling actuated switches. Slidebuttons are on $\frac{3}{8}$ " centers. Up to 3 miniature switch stacks, rated at 3 amps; 300 watts max., AC non-inductive load, can be mounted at each station for a minimum of 1-A (SPDT) to a max. of 3-C (3PDT) per station. To order, refer to "SWITCH STACKS", Series 80P, 800P. For power switching, snap switch

Only Switchcraft offers 3 complete lines of slide, multiple station pushbutton, and lever switches . . . 3 proven solutions to man-machine interface problems.

SLIDE ACTION . . . Series 39000 "Multi-Slide" switches provide design engineers with an entirely new switching method to solve man-machine system problems. "Multi-Slide" switches help eliminate operating confusion inherent in constant manipulation of pushbutton matrixes by providing slide-switch variety. **Series 39000** Switches offer 3 types of actuation: Interlock, all-lock, non-lock.

PUSHBUTTON ACTION . . . Whatever your requirements for switching, you will find Switchcraft "Multi-Switch" switches enable you to design a cybernetically correct, error-reducing panel. Both illuminated and non-illuminated types are available with non-lock, all-lock, interlock, push-to-lock, push-to-release functions. Illuminated types offer single or multiple lighting effects. **Series 7000 and 21000** frames are available from 1 to 37 stations in a row. Little "Multi-Switch" **Series 35000, 36000, 37000**, are compact switching units offering 1 to 18 stations in a row.

LEVER ACTION . . . Switchcraft offers the largest selection of illuminated and non-illuminated lever-type switches in the industry. They come in a wide choice of sizes, 2 or 3 position, locking and non-locking types. They range in size and style from miniaturized "Feather Lever", featuring changeable push-on color knobs to "Lever-Lite", a 3-color illuminated type lever switch; to the industry standard "Telever", a telephone type switch featuring field changeable functions.

modules can be mounted to each station. Refer to "PIGGY BACK" SNAP-SWITCH MODULES, Series SA, SC and SD under little "Multi-Switch" listing. Switch frames mount on panels up to $\frac{1}{2}$ " thick. End brackets have four 6-32 tapped mtg. holes. A black slidebutton is furnished for each station and a red slidebutton is supplied when switch requires a release. A kit of chromatic legend tabs, **Part No. K-120**, is available for positive color coding of an actuated station. Kit consists of 10 tabs each of 6 colors: Red, black, green, blue, white and yellow. Pressure sensitive tabs mount easily in recess of slidebutton; can be hot-stamped for identification. The following part numbers cover basic frame only. To complete assembly, order switch stacks for each station and/or snap-switch modules, as required. Only the most commonly used frames are listed here. For complete engineering information on Series 39000 switches, request Switchcraft Bulletin 158a.

"GLO-BUTTON" PUSHBUTTONS

SERIES X, Y, Z

Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Buttons" look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with std. .050" x .187" plungers, as Switchcraft Series 7000, 8000, and 35000 "Multi-Switch", and other switches having maintained plunger action with a max. of $\frac{1}{8}$ " fallback. "Glo-Buttons" have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear (Figs. A). An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the

button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see Figs. B. All "Glo-Buttons" have black button housings and are available with std. legends: "A" thru "Z", "0" thru "50", and "ON", "OFF". Eight basic types of buttons are offered: To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order $\frac{1}{2}$ " sq. "Glo-Button" with black screen, orange-red illuminator and numeral "7", part number would read X21248-7.

"Multi-Switch"® Switches

Basic design simplicity provides a unique multiple station push-button switch that's rugged, compact, versatile and completely flexible in switching functions. Hundreds of circuit and function combinations are possible as **all switching components—frame, switch stacks, lamps and other accessories are changeable.** Order the "Multi-Switch" you now require, from stock, and later change circuits and/or functions in the field by simple positioning adjustments of stop plate, latch bar spring, and/or interchanging or adding-on switch stacks. **For a complete multiple station assembly, you must order the proper frame and the necessary switch stacks, for each station on the frame.** Optional accessories include: **Lock-out bar** which prevents operation of more than one station at a time, and a **solenoid release** to provide automatic remote release of activated stations. Standard "Multi-Switch" frames are available with these functions: **Interlock**, restores to normal any previously actuated station when another station is actuated. **Non-Lock**, momentary action of each station. **All-Lock**, cumulative locking of all stations with restoration of all stations to normal when release station is depressed. **Specify switching function when ordering frames listed below.**

Audio Connectors

is the most complete low-cost family of miniature audio connectors available today. Exact replacements for plugs and receptacles used on most foreign built recorders, radios and dictation equipment. Switchcraft/Preh 2 to 7 contact connectors include male and female plugs and receptacles with bright nickel-plated shells and plastic snap-on shells. Check these outstanding features . . . lock-ring coupling, silver plated contact pins for low contact resistance, contact friction coupling for low mechanical interference noise, exclusive "automatic" grounding and polarization provisions. Thirteen receptacles offer some form of internal switching, including "Ground Key-Rib" or "Ground Contact"—electrically integral with the connector shell—is provided in each plug and receptacle (except those with plastic shells) to ground or shield the connector shell. Designed for low level circuitry, they have unlimited use in commercial, industrial, consumer and military applications.

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated

condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

Std. Pkg. 5

PRETRAVEL Pretravel is the distance or angle which the actuator moves from the actuator free to the actuator operating position.

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position releasing position.

TERMINATING JACKS

These jacks are used in circuitry in which there is a need to maintain a known load in the circuit. When plug is fully inserted load is automatically disconnected and circuit transferred to plug. Similar to regular single jacks — fitting same cable, etc. (For example: 89-01-40-50 fits RG-58 cable).

TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems — wherever very large numbers of circuits need convenient places of termination.

Terminals are of three basic types: standard solder types, wire wrap type, and hybrid wire wrap on one side, solder on the other. All are of 0.040" brass, tinned or plated. Standard solder type available in four different lengths with "butterfly" notched design assuring retention of wire. All blocks having numbering along the top row. Costs as shown are for standard solder lugs.

"421 SERIES"

of black phenolic plastic material, including base. Provides 20 terminals in two banks of ten, with up to ten rows. Base 6 $\frac{1}{4}$ " long x 3" wide. Has mounting strip inset in groove in base, with standard mounting dimensions accommodating #10-32 screws. Interchange with W.E. "L" series, as indicated by () following TRIMM no.

			Vaco Single-Grip Terminals and Connectors are one-piece, non-insulated basic type and meet most requirements.		Similar to 10000 Series except with brazed barrel, providing a seamless connector. Especially recommended for solid strand wire.		Vaco Double-Grip Terminals and Connectors are excellent wherever vibration is a problem. Tin-plated bronze sleeve provides area for double crimp that prevents strain from reaching the barrel crimp.		Vaco Single-Grip Insulated Terminals, with heavy plastic sleeve, provides insulation from tongue to wire insulation. The sleeve also prevents wire from flexing at the crimp for greater strength.		Similar to 50000 Series except with flared or bell-mouth insulation.		Vaco Double-Grip Insulated Terminals and Connectors have a sleeve that tends beyond tin-plated sleeve to provide complete insulation from tongue to wire. Engineered to meet the exacting requirements.

Vinyl Insulating Sleeve

INSULKRIMP®

INSULKRIMP® terminals and connectors incorporate all the advanced features of KRIMPTITE construction, plus the advantages of the permanently attached rigid vinyl plastic insulating sleeve. Up to No. 10 wire range basic barrel is Krimptite; size No. 8 and up uses Versakrimp (brazed seam) barrel. Replacing slower methods of individually insulating connection with tubing or tape, INSULKRIMP Terminals and Connectors are rapidly applied in a single application. The tough insulating sleeve is permanently attached and will not slip off, fracture, or unravel. In addition, INSULKRIMP construction affords increased vibration resistance due to its insulation supporting plastic sleeve. Operating Temperature Range: continuous duty from -40° to 220°F; intermittent duty to 300°F.

NYLAKRIMP®

Wire Ranges 8 thru 4/0 Has the same features as the Versakrimp except that it has a Nylon insulated sleeve. Nylon Sleeve ideal for high temperature applications.

Plated Brass Sleeve
Nylon Insulating Sleeve

AVIKRIMP®

AVIKRIMP® terminals are truly the ultimate in construction and performance. To all the VIBRAKrimp features has been added the permanently attached and overlapping NYLON insulating sleeve — no extra insulation necessary. It provides extra barrel strength and insulation grip to resist high vibration plus heat-resistant pre-insulation. Color coded for rapid identification, these terminals are complete in themselves, needing only the proper wire and crimping tool. WALDOM offers many sizes and types with the maximum in reliability for your most critical applications. Operation Temperature Range: continuous duty from -40° to 250°F; intermittent duty to 350°F.

NON-INSULATED

KRIMPTITE®

KRIMPTITE® terminals and connectors are the most modern labor saving answer to your wiring problems. Functionally designed to make positive connections with a minimum of experience and time needed for application. Uniformly reliable connections can be made in a fraction of the time formerly required by less reliable and more costly methods. Available in a wide range of types and sizes to meet your every wiring need. Minimum 1/4 inch barrel lengths are available in all terminals listed.

Brazed Barrel

VERSAKRIMP®

VERSAKRIMP® terminals and connectors have all the advantageous features of the KRIMPTITE construction plus the universality and higher tensile strength afforded by BRAZED BARREL construction. The seam is bonded with a special silver brazing alloy, and cannot possibly pull open under any conditions of stress or wire pull. Capable of being crimped by a wide variety of crimp styles, a new freedom of selection is available for your needs. Crimping location is not critical, as the specially brazed seams are guaranteed not to split and may be crimped from any direction. Recommended for both stranded and solid wires.

Plated Brass Sleeve

VIBRAKrimp®

VIBRAKrimp® terminals are particularly suitable where high vibration is a factor and firm insulation support is required. The seamless annealed electro-tin plated brass sleeve adds over-all strength to the terminal construction while the "skirt" portion which extends beyond the barrel is crimped in the same operation as the barrel and the wire is permanently held, preventing creep. Insulation is anchored and any wire flexing takes place beyond the terminal.

BASIC TERMINAL CONSTRUCTION DETAILS

Made of pure electrolytic copper for highest conductivity (MIL QQ576). Annealed to flow freely under crimping pressure for best connection. Electroplated with pure tin for greatest corrosion-resistance, in accordance with the highest standards of the electrical industry and MIL-T-10727 (Ord.).

Modern construction from a single piece of metal gives greater strength, lower cost, uniform current flow for maximum conductivity.

All terminals and connectors have wire range clearly stamped on back.

The open-end design allows quick visual inspection of wire location before and after crimping.

Strength gussets reinforce terminal where flat tongue has been formed into round barrel.

Multiple deep V-notches securely grip wire, provide best contact and maximum holding power over wide contact area.

Long barrel in all sizes eliminates loss of time finding a critical crimping location, eliminates squeeze-outs and shearing. Allows wider crimp for extra-strong, vibration-proof, moisture-tight connection with wide contact area.

Chamfered edge for faster, easier insertion of wire. Actually gathers frayed strands by funnel action.

"STEP" CONSTRUCTION GIVES EXTRA PROTECTION

Cutaway views of an AVIKRIMP barrel show how the "step" design for the brass sleeve acts to socket the wire insulation solidly in both the AVIKRIMP and VIBRAKrimp styles for the ultimate in anti-vibration protection. In addition, the external "hump" marks the exact location of the barrel end — a quick guide to the target.

to give a trim appearance to otherwise unsightly wire connections. neatly over the stranding and confine it directly under binding screw and automatically insure greatest possible contact. The cushion-like con-

struction when closed permits binding nut or screw to sink into the soft copper and so serve the purpose of a lock nut and is therefore vibration proof. Each is adaptable to a wide range of wire sizes. For standard, extra flexible or solid wire.

RECTANGULAR TONGUE TERMINALS FOR TERMINAL BLOCKS

MIL-E-16366D (SHIPS) covers non-insulated brazed barrel rectangular tongue terminals. Insulated versions of these terminals covered by MS-17143 (SHIPS). Since the Navy and AWG Wire Sizes, Tongue Width, Clearance, and Stud Size are identical for Specifications, these common basic dimensions are in the center section of the chart below. The left and right sections of the chart list the individual Specification, the Waldom Part Number, Length, and the Maximum Wire Insulation Diameter (for MS-17143).

SOLDERLESS TERMINALS AND CONNECTORS

MILITARY SPECIFICATION TERMINALS (MIL-T-7928F)

These terminals are produced to military specification. **MIL-T-7928F (ASG)** of the U. S. Army, Air Force, Ordnance, Coast Guard, Marine Corps and Navy.

Class 1 and Class 2 are designations for the two classes of Military Approvals. Class 1 Terminals and Splices are those which meet all performance requirements of their Military Standard specification when crimped with Military Specification crimping tools.

Class 2 Terminals and Splices are those which meet all performance characteristics of their Military Standard specification when crimped with the manufacturer's recommended crimping tools.

Type I and Type II designate insulated and non-insulated Terminals and Splices. Type I is un-insulated. Type II is insulated.

HAND RATCHET AND MAINTENANCE TOOLS

RATCHET TOOL

A precision production tool. Lighter in weight and easier to use than any similar tool. Unique pin-action gives greater mechanical advantage. The tool crimps even the heavier wires and terminals (up through #10 AWG) with a light squeeze. Tamper-proof ratchet mechanism is safe for fingers. The ratchet mechanism will not release until the crimping cycle is complete, but no extra effort is required for release and handles then open automatically. Precision-calibrated and crimp-tested at the factory to give perfect electrical connections every time.

Part No. CT-4050 Price \$4.35 ea. Net

Here's the long-awaited answer to the problem of crimping large wire range terminals in maintenance and production work—without costly, permanently mounted equipment. The new Waldom "Selectakrimp" is a completely portable, easy-to-use tool. To operate, all you need is any conventional 2-lb. hammer to produce the closing pressure by striking the ram. An easy-to-read crimping scale prevents under-crimping. Over-crimping is prevented by unique design of the nest and indenter. Terminal being crimped is held securely in the nest by a strong, completely enclosed spring. Uniform, positive connection crimping is assured by the "in-line" ram action.

A single Selectakrimp tool can serve various departments, because its light weight (1¾ pounds) makes it easy to bring the tool to the work. Where production requirements call for simultaneous use in several locations, the low cost of Selectakrimp makes it economically feasible to have more than one in plant or shop.

Built to last indefinitely, the ram is made of specially heat-treated tool steel, and the base, of cast malleable iron. Base design prevents rocking of tool under closing pressures.

VB SERIES — VOLTAGE BAND MONITOR

The VB Series offers protection to equipment which is required to operate between two voltage limits. The solid state monitor determines preselected under or over voltage conditions, and de-energizes an internal 10A DPDT control relay if these limits are exceeded. The monitor is equipped with time delay to accommodate start-up transients.

UO SERIES — OVER VOLT.-UNDER VOLT. MONITOR

The UO Series consists of a solid state voltage detector that senses a voltage greater than a preset "pick-up voltage" and causes an internal DPDT relay to operate. When the voltage drops to a preset "drop-out" voltage the output relay will de-energize. A hysteresis is set into each standard monitor to allow a differential between pickup and dropout. For specifications, see VB Series.

PB SERIES — 3 PHASE VOLTAGE BAND MONITOR

The PB Series offers protection to three phase equipment which is required to operate between two voltage limits. The three phases are monitored for a preselected under or over limit. An internal control relay is de-energized when the voltage goes outside of these limits. This device provides both

under and over voltage monitoring of each phase of a 3-wire, 3-phase power line in one package. The monitors are equipped with a time delay to accommodate start-up transients. With normal operating voltages on all phases, an internal relay will be energized. If the voltage on any phase goes above or below the drop-out limit, the signal to the time delay will be removed. If this out-of-limit condition exists on any phase, for a period longer than the release time of the time delay, the output relay will de-energize.

SL Series—PHASE SEQUENCE & PHASE LOSS MONITOR

The SL Series is designed for use in applications where motor rotation connection to the power line is critical, or where loss of one or more phases may cause damage to electrical equipment. If the phase sequence is correct and full-line voltage is present on all three phases, the internal relay will be energized. If one or more phase is lost or if the phase sequence is reversed, the control relay will de-energize.

CM SERIES — CURRENT MONITOR

CM Series consists of a Solid State, magnetic, current detector which monitors current level. When the monitored current exceeds the trip point for a period greater than the response time, an internal 10 amp. DPDT relay will operate. A current decrease of at least 5% of trip point is required for relay to de-energize. The monitors are equipped with appropriate time delays to accommodate start-up transients and short-time line surges.

SENSORS, PROTECTIVE

Fast-acting voltage, frequency and phase rotation sensors provide accurate repeat cycle characteristic of solid state input sensors, plus dependable 3DPT relay output. For use in visual or audible indicating devices or transfer switches. Sensors are non-latching; electrical latch and unlatch can be obtained by interwiring Guardian 24 VDC or 115 VAC enclosed relays. Versatile mounting; accepts printed-circuit socket, chassis mount, clip or chassis-mounted socket. 3DPT contacts rated 10 amps resistive at 115 VAC. Temperature range, 0°C to 50°C. Life expectancy, 100,000 operations min. Protected for transient voltages: 600 volts on 3-phase models, 2500 volts on all other types. With plastic dust cover.

3-PHASE, 4-WIRE VOLTAGE SENSING DEVICE

SERIES TMP

SERIES TMT

Series TMP Time Delay Modules are available in "on-operate" and "on-release" configurations with two time delay and three standard input voltage ranges. Time delay is externally adjustable within the two ranges from 1/2 to 100 seconds and 100 to 300 seconds. Repeatability is ± 1 percent under normal conditions. Life expectancy is one million cycles. Standard input voltages are 24VAC, 115VAC and 24VDC. Other ranges are available as options. The unit is terminated in an octal plug for quick mounting and remote control of relay and other switching devices.

Series TMT Time Delay Modules are designed to permit a relay to be mounted directly onto the module or to permit stacking of TD modules for extended time delay periods. The unit can also be mounted direct to a printed circuit board for remote control of a relay or other switching devices. Modules provide "on-operate" or "on-release" operation at input voltages of 24VAC, 115VAC and 24VDC. Other input voltages are available as an option. Time delay is externally adjustable within ranges of 1/2 to 100 seconds and 100 to 300 seconds. Repeatability is ± 1 percent under normal conditions. Life expectancy is one million cycles.

Now, for the first time, a Solid State Power Control is available which is adaptable to a wide variety of applications by a simple turn of a screwdriver!

An internal trimmer allows the starting point of the control voltage of the Ohmitrol to be set anywhere within the stated trimmer voltage range. (This adjustment can be preset at the factory at small additional cost).

From the starting point to full line voltage, infinitely smooth control is obtained by means of the control knob. An "on-off" line switch actuated at the counterclockwise end of the control knob rotator is provided on all models.

Ohmite solid state power controls are the smallest 1 or 2 KW controls available and offer the advantages not only of convenient size, but also of power savings, long life and low initial cost.

Two styles are available: the component style for panel mounting in equipment, and the lightweight, self-contained portable style. Portable units are completely self contained with grounded line cord and standard grounded AC receptacle.

Ohmitrol Controls are available with AC output and with two kinds of DC output delivered simultaneously. One kind consists of rectified DC, at approximately full line voltage; the other is the variable or controlled DC. This double output is useful, for example, for controlling shunt wound motors. Two-way terminals at the rear of the controls accept quick-connectors (push-on connectors), or can be soldered.

SYNCHRONOUS MOTORS AND TIMERS

Versatility is the characteristic which design engineers need — and find — in Bristol Synchronous Motors and Timing. Bristol's unusually broad experience and range of design and manufacturing skills are particularly valuable where requirements must be met.

The devices shown are among the most widely used. All can be mounted in any position, and take a minimum of materials. Materials are selected on the basis of their suitability to provide long service, and perform well under a variety of conditions. Bristol engineering service is available for applications that require custom design and manufacture.

SERIES 31 REPEAT CYCLE TIMER. Low-cost multi-contact timer with high repeat accuracy. For vending machines, home appliances, industrial program controls. Speed Ranges: 1 Revolution Per Second to 1 Revolution Per Month. Motors standard, or high torque reversible. Switch Rating: 20 amp. at 115-230 V AC (also in 1/2 hp. at 125 V AC). Switches: enclosed snap action SPDT type. Cams: dual cams with set screws for field adjustment. Cut cams available on special order. Bulletin B-22. Available with 1 to 12 Switches.

SERIES 6100 TIME DELAY RELAY. Universal Time Delay Relay providing holding solenoid starting with a reliable timed contact operation. It provides three types of load which give seven types of load operation in a single unit. It may be wired up to one of five types of operation: momentary automatic reset; momentary sustained reset; sustained switching; demand or cascaded operation. Size: 1 1/2 inch diameter by 5 1/4 inch long. Timer cam 1 1/2 inch thick x 3 3/8 inch square. Mounting allows standard 3-stud panel mounting. For further information request Bulletin No. B-21.

SERIES 21 TIME DELAY RELAY. General timer for instantaneous reset-type action, such as timers for photography, electronic safety, alarms, signals, etc. (Life expectancy over 1 million cycles.) Compact. Quick reset time (well under 1/5 second). Repeat accuracy better than 1% full scale. Time setting: 15 seconds to 3 months full scale. Rating: 10 amp (non-inductive load), Voltage: 115 V AC, 60 cycles standard. Optional adjustment feature available. Bulletin B-21. Available with 1 to 7 Switches.

SERIES 41 ELAPSED TIME INDICATOR. Adaptable to panel or unit mounting. This low-cost series provides simple installation. Choice of four mounting methods: non-reset or reset. Maximum readings: units from 9,999.9 to 99,999 hours. 1/60 Cycle standard. and other voltage available. For further information on the three above request Bulletin B-21. Both Non-Reset and Reset Table Models.

MODEL 42 DUAL SPEED UNIT. Consists of two motors assembled to a common output shaft through a differential. Output speed is the sum of the two motor input speeds. Therefore, two different speed unidirectional motors provide a choice of 3 output speeds (either motor speed or the sum of the two motor speeds). Available with reversible motors for further variations in output speed. Standard units also available incorporating 3 and 4 motors providing up to 40 output speeds by electrical switching. Dimensions depend on the design of the unit in question. For further information request Bulletin B-24.

SERIES 47 REPLACEABLE SWITCH REPEAT TIMER. A multi-contact program timer which allows easy switch replacement without the need for disassembling. In addition one turn of the adjusting screw provides a 2% variation of sequence. Switches are rated at 6 amps-115 V AC. Available in a wide range of switches and combinations. Request Bulletin B-20. Available with 2 to 20 Switches.

BRISTOL SERIES 55 DELAY TIMER, the lowest cost timer with the adjustable dial. Use when short time-delays are required. This Delay Timer has a progress pointer which indicates the progress of a cycle, automatically resets when power to the duty-matched synchronous motor is interrupted and manually adjusted by a selective dial which can be reset at will. The standard motor is for 115v/60 cycle, other ratings are available at small extra cost. Switch is SPDT rated 20 Amps resistive load at 115-230 VAC. Delay times are available in 15, 30, 60 and 120 second time delays. Bulletin B-32.

MODEL 317 AND 318 TRANSISTORIZED DC MOTOR. This DC motor consists of a synchronous hysteresis motor with a transistorized inverter circuit. Ideal for long, reliable use in high humidity or saline atmosphere, with no objectionable radio noise. Speed ranges from 1 Rev per Month to 1500 RPM. Speed accuracy $\pm 10\%$; 16 in. oz. starting torque at 1 RPM. Suitable for ambient temperatures ranging from -10 degrees C to +65 degrees C. Model 317 dimensions 3 3/4" wide x 3" high x 1 3/4" deep. Model 318: 2" in diameter x 2 3/4" long. For further information request Bulletin B-26.

THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality INSTANT LETTERING® transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

PLANETARY DRIVES

599

6665

Two ball-type planetary drive units are useful whenever a compact device is needed for reduced-speed operation of light mechanisms. These units depend on the action of steel balls that rotate between the knob shaft and a concentric sleeve that is attached to the driven instrument. The units are adjustable so that the pressure on the balls can be varied to match the operating load, this assures maximum smoothness while maintaining adequate torque. Maximum torque is 14 inch ounces; minimum torque is 10 inch ounces. The ratio is approximately 5 to 1, and two units may be used in tandem to produce a 25 to 1 ratio. These are precision devices for both military and commercial applications.

LOW-SPEED PLANETARY DRIVE

For slow speed operation at approximately 5 to 1; high speed at 1 to 1. The Dual Concentric Knob below fits this unit. Complete with mounting accessories.

Part No. 599 Net Ea. 11.62 25 to 99, Ea. 10.90 100 or more, Ea. 9.15

HIGH-SPEED PLANETARY DRIVE

As above unit, except that the sleeve for the high-speed knob has been modified. In its place is a threaded sleeve with shoulder, so an indicating dial or pointer may be installed. Clamping nut, clamping washers and planetary anchor are included.

READOUT INDICATORS

NEW 5V. MINIATURE ENCASED READOUTS

MS-4000B—7-segment incandescent readout has a bright display (for 0 to 9, and some alpha) that is clearly read under all ambient lighting conditions. The flat, single-plane display allows true wide-angle viewing without distortion. Large character size (.325" x .600") relative to case size (.552" x 1.18"). Makes use of high temperature materials housed in a one-piece, black matte metal case. Terminal pins are nickel-plated brass. Lamps are closely fitted into a compartmented block with short leads virtually eliminating vibration problems. Vibration test: 2000 c/s. Lamps are separately lit to form any numeral as desired by use of an external decoder/driver. High reliability, long life #683 T-1 subminiature lamps have a life expectancy of 100,000 hours.

MS-4100—as above, but with decimal and figure at a slight angle. Size same as above.

MS-4100S—symbol indicator with +, —, 1, and decimal. Segments at a slight angle.

MS-250A—smaller version of above. 0-to-9 character size. Snap-mount socket. Plastic housing.

MS-250S—symbol indicator (+, —, 1, and decimal) mates with MS-250A.

MS-4000DDM—decode display logic module for MS-4000 features plug-in display, integrated circuit compatible 4-line BCD input, automatic blanking of most significant leading edge zeros. P.C. board connector. Size overall: .65" w. x 1.18" h. x 4.0" d. with readout.

MS-4FB—mounting kit and frame: brushed aluminum or black bezel pr., mounting bars and red filter. Holds up to five MS-4000, MS-4100 readouts.

READOUT INDICATORS

RK Series—precision machined from 1-piece aluminum which also serves as a heat sink for the bulbs. Front and rear tapped holes for mounting on a panel or on RKA-2-8 brackets. The RK-FLV violet filter is available to reduce reflected lighting effects resulting in a better contrast.

Unique in-line design provides clear displays without focusing problems thereby allowing equally clear viewing from any angle. Compact size assures a neat fit in a limited space. Long life bulbs—20,000 to 50,000 hrs. Engraved acrylic plates are of a non-yellowing quality are mounted in a tightly-packed stack and edge-lit.

RKP Series—plug-in readout indicators are designed for ease of use.

RKF Series—has a larger 1-piece aluminum body with 1" high numerals, along with 2 long-life bulbs per numeral for increased brightness.
